PROFILE

I'm a Bootcamp went through, self-learned Web Developer. I always liked building and creating things, that's why coding gives me so much joy. So I decided to make it my all-day work and do something that I'm passionate about. For a start, I completed a Web Developer Bootcamp at KODILLA. Apart from it I'm constantly improving my skills and learn new ones. I'm motivated and focused on reaching my goal and work as a full-time developer.

LANGUAGES

English – C1 | German – Fluent | Polish – native

TECH SKILLS

Front-End		Back-End	Build & Management
- HTML5	- React, Redux, Router,	- NodeJS	- GIT
- CSS3 / SASS	- Styled Commponents	- ExpressJS	- npm
- JavaScript ES6	- RWD	- Websocket	- Webpack
- Handlebars	- AJAX	- MongoDB	- Jira
- Bootstrap	- Axios		

PROJECTS

Portfolio - This is my latest project, a react app using styled-components. I based it on function components. The styled elements are gathered in a separate File for each component and then imported. This gives a cleaner and more organized code. React scroll provides smooth scroll and react pure carousel a sleek image sliding. The contact form is linked through PHP with my email account. I used styled-components for the first time and I really liked that library. It's great how you can change styles through props and states.

Madzita-shop - Built from scratch a React-based online shop. This was my final project in the Web Developer Bootcamp. In the shop, you are routed through different sub-pages via react-router. The initial data is downloaded via Axios from a MongoDB cloud server and connected to the redux store. The node.js server response to get, getById, and post requests. After receiving an order the server sends a response with your full order and a unique ID created on the mongo cloud server. I also used browser local storage to save cart content.

Furniture-shop - On my Bootcamp course, I took part in a developer work simulation that lasted 3 weeks. My group was put in the middle of project development. We were managing the work through Jira where we assigned tasks for ourselves. We had to write daily reports about our progress. We also had weekly online meetings. I was responsible for adding new functionalities like state changes in the product data depending on the user choices. I added the whole Gallery components with styling and functionalities.

other projects to view in my portfolio.

EDUCATION & COURSES

05.2021 — in progress	Angular for Beginners - Udemy
03.2020 — 12.2020	Bootcamp Web Developer Plus - programming school KODILLA – Certificate of completion
09.1997 — 05.2001	Technical High School Sieradz

WORK EXPERIENCE

07.2011 – 01.2020	Outsourcing to BMW Dingolfing - quality control, production documentation, Coil-cut machine operator
